

This patient was referred to our office for evaluation of lower extremity pain and weakness, burning and neuropathic- type pain in the LWEX. She has a history of peripheral artery disease and a history of by-pass. Suffered from diabetes. Using a walker for ambulation. Chief complaint was lower extremity SnS that developed immediately following her by-pass surgery. She was diagnosed with peripheral neuropathy.

**DX:** cervical spinal cord compression ~ myelopathy secondary to cervical spinal stenosis, exacerbated by neck position during by-pass surgery.
